

Successful Completion of Iroquois' 08/09 Expansion Project

On November 1, 2009, Iroquois placed a second compressor unit in service at its Brookfield Compressor Station located in Brookfield, Connecticut, concluding the final phase of its 08/09 Expansion Project.

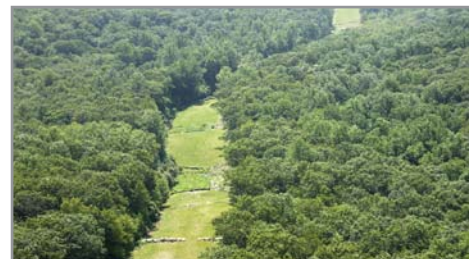

Designed to meet the energy needs of KeySpan/National Grid, the 08/09 Expansion Project will deliver an additional 200,000 million cubic feet per day of natural gas from Iroquois' interconnect with the Algonquin Gas Transmission System in Brookfield, CT to National Grid's local distribution system at South Commack, Long Island.

Construction activities for the final phase of the project began in March 2009 with site clearing and grading, while the actual construction of the compressor facility began in July. The addition to the

Brookfield Compressor Station included the installation of a 10,300 hp Solar Taurus 70 turbine compressor as well as a cooling facility.

Other facilities constructed in previous phases of the project include a 1.6 mile 36-inch diameter pipeline loop in Newtown, CT placed in-service November 14, 2008 and two 10,300 horsepower compressor units at a new station in Milford, CT placed in service January 14, 2009.

"The successful completion of the 08/09 Expansion Project will improve system reliability and further diversify supply options for Iroquois' shippers by improving access to Atlantic LNG, north-eastern U.S. storage, and emerging Marcellus Shale production," according to Jay Holm, President of Iroquois Pipeline Operating Company.

Iroquois Holds Open Season for NYMarc Project

On November 17, 2009, Iroquois announced an open season to solicit shipper interest in its NYMarc project proposed to connect rapidly expanding Marcellus gas supplies to New York, New England and Eastern Canadian gas markets. The estimated \$500 million project would include construction of 66 miles of 36-inch diameter natural gas pipeline in Southern New York and Northwest New Jersey as well as one compressor station in New York. The majority of the line is proposed to be located near existing energy corridors.

The open season will run from November 17, 2009 through January 29, 2010 and offers potential shippers the opportunity to request service as early as Fall 2014. Results from the open season will determine the design and scope of the project.

Our Redesigned Website has Arrived!

On September 30, Iroquois launched its newly redesigned website. The URL, www.iroquois.com is the same, but it now connects to a site with a fresh new look, enhanced content and increased functionality.

The focus of the redesign was to streamline the site to provide easier navigation to pertinent information.

Site Highlights:

- Increased search capability
- Enhanced content
- New Expansion Projects section
- An interactive map with photos & information on our compressor facilities
- Easier access to information

Milford Public Officials Tour Compressor Facility

On August 4th, Iroquois held an open house at its Milford Compressor Station for state and local officials to tour the facility that went into service on January 14, 2009 as part of its 08/09 Expansion Project.

The open house offered guests an opportunity to meet and converse with Iroquois representatives to gain a better understanding of the station's operation.

Among the officials in attendance were Mayor Jim Richetelli, State

Representative Barbara Lambert, Alderman Raymond Vitali and Fire Chief Louis LaVecchia.

During lunch, Iroquois extended its thanks for the City's assistance and cooperation in building the facility. Mayor Jim Richetelli also took the opportunity to reflect on the long-standing relationship between Iroquois and the City of Milford, noting that "Iroquois has been a great asset to the City of Milford as both a business and a community supporter."

Iroquois Rocks Out During its Annual United Way Campaign

Jay & the VPs take a bow with the Iroquois United Way Committee.

Every fall, Iroquois employees rally together to show their support for the Valley United Way (VUW) by participating in Iroquois' annual charitable giving campaign. While certainly not the largest company in the area to conduct such a campaign, Iroquois has consistently been one of the top contributors to the VUW.

Iroquois' week-long campaign offers many fun activities starting with an ice cream social kickoff and concluding with a donor thank you finale lunch.

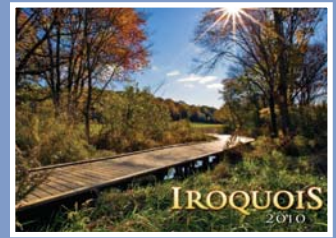

At this year's luncheon, the executive team was transformed into an 80's rock band and performed a spirited rendition of Bon Jovi's

"Wanted Dead or Alive" to a very enthusiastic audience.

The focus of the VUW is raising funds for its 24 partner agencies that provide essential health and human services to those in need. As many charities struggle to assist the increasing needs of their clients in these tough economic times, now more than ever the spirit of giving to those less fortunate has become so important.

As a result of this year's campaign, a contribution of \$60,000 has been pledged to the Valley United Way. Iroquois is truly proud of its employees who Live United by making such a positive impact in the community.

2010 Iroquois Calendar

As part of its Public Awareness Program, Iroquois produces an annual calendar featuring places and items of interest within our pipeline communities. The calendar, which provides important safety information, is mailed to residents and businesses located near the pipeline, as well as to public officials and local emergency responders.

The 2010 calendar celebrates our pipeline communities by spotlighting some of the many environmental initiatives and passive recreation projects they have accomplished with funding from the Land Preservation and Enhancement Program (LPEP), the Land Enhancement and Acquisition Fund (LEAF) and the Community Grant Program.

Since 1991, Iroquois has collaborated in over 300 environmental education, land preservation and passive recreation projects through these programs.

Hot off the press, calendars should be arriving in mailboxes by mid-December.
